Introducing Pantheon-Cloud: Framework for IOT and AI

Sanctuary Software Announces Cloud Platform Solution at Web Summit Lisbon

November 10, 2025 —Sanctuary Software has announced the availability of Pantheon-Cloud, its “*Ready to Run – Anywhere*” cloud framework. The company is showcasing the platform for the first time at Web Summit in Lisbon.

Pantheon-Cloud is a cloud platform framework designed to build fast, limit risk, control costs, and maintain control over intellectual property. Pantheon-Cloud deploys its containerized services across a managed cluster, allowing the platform to scale easily from a single instance (e.g., desktop development) to large, multi-region cloud deployments. Focused on safety-critical systems and maintained per IEC-62304, Pantheon-Cloud serves as the backbone for medical device, aerospace, and industrial applications.

The core of Pantheon-Cloud is session management, providing a solution for scalable IOT device connectivity, fleet management, and AI contexts. IOT support includes device management, data ingestion, and protocol gateways. AI features include custom model hosting, foundation model connectivity, and MCP support. The included Athenaeum content management system acts as the cornerstone for data isolation, pre-processing, and injection.

Flexibility goes beyond design with Pantheon-Cloud. Deployment options include SaaS fully managed by Sanctuary Software, SLA in a preferred cloud provider, and one-time enterprise license. Select the option that fits business requirements while escaping royalty and usage fees.

Protecting intellectual property, maintaining user privacy, and ensuring regulatory compliance are key concerns for enterprises deploying cloud applications. Pantheon-Cloud provides the framework that you can trust along with administration and monitoring tools you can use to verify.

For more information about Pantheon-Cloud, catch Sanctuary Software at Web Summit booth E458 or visit <https://www.pantheon-cloud.com/>.

About Sanctuary Software Studio

Sanctuary Software Studio, Inc. provides software development and design services that empower companies to adopt technologies and enter new markets. The team of technology professionals work in a creative environment that fosters innovation – embracing project limitations, selecting platforms based on goals, and applying expertise to overcome challenges. Sanctuary Software’s collaborative developers provide end-to-end implementation or augment existing project teams, delivering products on any platform including embedded systems, mobile and cloud. Since 1994, the company has delivered certified solutions for mission critical applications with an emphasis on formal design and validated performance across markets concerned with cybersecurity, privacy, and regulatory compliance.
